Short and long term rental options available.

Mobile Wireless Broadband - MVS Series

True mobile broadband applications are now a reality with the mobile MVS Series of satellite antennas. The MVS Series boasts automatic satellite antenna alignment and satellite acquisition, eliminating the need for certified technicians on-site.

Attach the MVS Series to any vehicle or mobile office. Once on-site, simply push one button for true broadband high speed satellite communications. This means unlimited access to faster internet and email, reliable data transfer and low cost Voice over IP (VoIP) telephony.

Transportable Wireless Broadband - TVS Series

The TVS Series Satellite Communications Trailer operates as a self-contained communications unit providing easily transportable broadband communications to companies requiring faster speeds and more reliability from private networks. Both outbound and inbound will benefit from services including high speed web browsing, email retrieval, reliable data transfer, cost saving Voice over IP telephony and video conferencing. The trailer can also be connected into an Ethernet LAN or provide Wireless LAN/WAN by using a wireless access point.

The trailer's robust design is built for off-road endurance. With an extra heavy duty single axle, chequer plate floor and body constructed of durable hot dipped galvanized steel - designed specifically for tough conditions.

Simply park and lower the trailer stabilisers to allow the tow vehicle to be used elsewhere. Align to satellite and provided you have an unobstructed view to the western horizon, within 20 minutes you can connect your computers to the IP network. Broadband download speeds range from 128kbps to 10mbps down and 64kbps to 512kbps up. Enjoy the benefits of reliable, high speed mobile communications anywhere you can drive a vehicle.

Purchase or rent satellite communications solutions from TR Telecom today.
