

TR Telecom to attend Australia's largest wireless and mobility event

Local wireless distributor TR Telecom is excited to be part of Australia's biggest wireless and mobility event; Wireless World 2008, in Sydney 2-3rd April.

Supporting TR Telecom will be international backhaul manufacturer DragonWave, known globally for their innovation in high capacity broadband wireless networking solutions.

Promoting the latest in wireless connectivity, TR Telecom will be showcasing DragonWave's Horizon Compact 800 on the stand. Launched internationally late last year, it's the only licensed, zero-footprint wireless carrier network solution on the market.

With its increased reach, full flex bandwidth control and simplified operations, the Horizon Compact provides a much needed solution to the backhaul bandwidth problem.

Showing their commitment to the booming local wireless market, DragonWave's Director of Business Development Chris Russell will be visiting Australia to attend Wireless World 2008 alongside TR Telecom, giving attendees the chance to speak directly with an international specialist on the Horizon products and other Dragonwave solutions.

Held at the Sydney Convention and Exhibition Centre, Darling Harbour on the 2nd and 3rd of April, the Wireless World event promises attendees the latest in wireless and mobility technology. And for those in business or industry, attendance is free with pre-show registration encouraged via the show website to avoid the queues.

ENDS

About Dragonwave

DragonWave Inc. is a leading innovator who designs, develops, markets and sells carrier-grade microwave equipment offering high capacity broadband wireless systems for network operators and service providers.

Founded in 2000, the company has achieved customer recognition for quality, innovation, and technical advances in delivering native Ethernet wireless point-to-point networks for the transport of voice, video and data.

DragonWave's corporate headquarters are located Ottawa, Ontario, with sales locations in Europe and North America. Our products are widely deployed in more than 25 countries, with over 150 customers ranging from tier 1 Service Providers, Government agencies and large enterprise
