

November 2007

20% off the toughest leaky feeder cable around!

Leading mining communications company Minecom announced an end of year promotion, offering 20% off all leaky feeder cable orders placed before 31st December 2007.

Consistent communication in underground areas and mine sites is an ongoing issue for mining and tunnelling companies. Enclosed spaces such as mines and tunnels make it difficult for traditional antenna systems to penetrate and provide reliable and consistent coverage.

To combat this, Minecom created their world renowned leaky feeder solution including the cable. The leaking of the signal along the leaky feeder cable provides more effective, constant coverage, at all desired points deep within a tunnel or mine situation.

Minecom's leaky feeder system is manufactured to produce maximum results. The design utilises small inline, bi-directional amplifiers to deliver maximum signal strength and connection of the leaky feeder cable to components and peripherals is simple, ensuring easy ongoing maintenance and system scalability.

The foam dielectric construction makes the Minecom cable stronger and less susceptible to crushing than most other brands of cable. Compatible with all brands of leaky feeder systems, the leaky feeder cable is manufactured to the stringent specifications and appropriate Australian standards.

Applications for leaky feeder cables include:

- Extending existing mine radio communications networks
- Distributing voice, video or data underground
- Tunnels and large construction projects

For a limited time, Minecom is able to offer a 20% discount off the regular price of our VHF & UHF⁺ cable, with larger discounts available on large volume orders. You will need to be quick though; the offer is only valid on orders placed before the 31st December 2007.

Enquire now for pre-Christmas delivery.

ABOUT MINECOM

Minecom was founded in Australia nearly 20 years ago to provide integrated communications and electronic equipment to the local mining industry. A winning combination of quality product and service has seen the business grow to become a leading niche supplier to the international mining industry.

Minecom is now part of the TR Corporation; a group of technology specialists, with extensive engineering and sales resources, servicing major mining and tunnelling companies around the globe.
